

Total Station and CAD. Connected. by TosCAD.

The direct link between your total station and CAD application:

TosCAD measures straightaway into your CAD software. Without detours.

What is TosCAD?

TosCAD is a comprehensive toolbar to link a total station to your preferred CAD software.

Using TosCAD you operate your total station easily from your PC.

Measuring

With just one click, TosCAD triggers a measurement and transfers the readings to your CAD program.

You can watch your CAD models grow measurement by measurement.

Stake Out

To stake out points, axes, circles or polylines, just click on the elements in your CAD drawing and TosCAD guides you to your destination in both, position and elevation.

Stationing

TosCAD provides convenient options for stationing. Using free stationing it allows you to place your instrument at an optimal location at the construction site.

TosCAD enables measuring of

- 2D and 3D-coordinates
- Distances (horizontal, vertical and 3D)
- Angles (horizontal, vertical and 3D)
- Slopes

ANDROTEC

AndroTec GmbH

Get to the point. With AndroTec.

TosCAD's Toolbar

TosCAD acts as a plug-in for your favourite CAD program and makes mastering your total station a child's play!

Select in CAD what you want to draw and get the coordinates by measurements.
